The University of New Hampshire

Survey Center

The UNH Survey Center is an independent, non-partisan academic survey research organization and a division of the UNH College of Liberal Arts.

The Survey Center conducts telephone, mail, e-mail, Internet, and intercept surveys, as well as focus groups and other qualitative research for university researchers, government agencies, public non-profit organizations, private businesses, and media clients.

Our senior staff have over 40 years experience in designing and conducting custom research on a broad range of political, social, health care, and other public policy issues.

EXECUTIVE SUMMARY

The University of New Hampshire Survey Center included a series of questions on its April, 2010 Granite State Poll for NH Department of Environmental Services, Water Division. The major purpose of these questions was to understand the amount of unused pharmaceuticals and the disposal of those pharmaceuticals in NH households. Five-hundred and three (503) New Hampshire adults were interviewed by telephone between April 8 and April 18, 2010. The margin of sampling error for the survey is +/- 4.4%. (See Technical Report below for a more detailed description of survey methods.) The following figures display survey results, detailed tabular results can be found in Appendix A, and Appendix B contains the survey instrument. The major findings of the survey include:

Figure 1: "Now, I would like to talk about over-the-counter and prescription medicine. How does your household typically get rid of unused or expired medicines?" [MULTIPLE RESPONSES POSSIBLE, ANSWERS MAY ADD UP TO MORE THAN 100%]

Figure 2: "Thinking about all the places in your house where you keep over-the-counter medicines, that is medicines that you can purchase without a prescription, what is your best estimate of the total number of containers of ... over-the-counter medicines currently in your house?
... prescription medicines currently in your house?"

Figure 3: "Approximately what proportion of all prescription medicines in your home are household members actively using or planning to use in the next six months?"

Figure 4: "Thinking about any unused prescription medicine you have in the home, why is this medicine not likely to be used in the next six months?" Any other reasons?" [MULTIPLE RESPONSES POSSIBLE, ANSWERS MAY ADD UP TO MORE THAN 100%]

Figure 5: "Thinking about any unused prescription medicine you have in the home, why have you not disposed of it? Any other reasons?" [MULTIPLE RESPONSES POSSIBLE, ANSWERS MAY ADD UP TO MORE THAN 100%]

Figure 6: "Have you seen the State of New Hampshire's guidance about how to properly dispose of unused medicines?"

Figure 7: "When you think about the disposal of unused medicines, both prescription and over-the-counter, do you worry about any of the following ..."

TECHNICAL REPORT

How the Sample Was Selected

The Spring, 2010 Granite State Poll was a survey of randomly selected adults in the state of New Hampshire. This survey was conducted using a procedure called Random Digit Dialing (RDD) which is described below.

A sample of households in the area was selected by a procedure known as random digit dialing. The way this works is as follows. First, with the aid of the computer, one of the three-digit telephone exchanges that are currently used in the area (e.g., 772) is randomly selected. The computer then randomly selects one of the "working blocks"--the first two of the last four numbers in a telephone number (e.g., 64)--and attaches it to the randomly selected exchange. Finally, the computer program then generates a two-digit random number between 00 and 99 (e.g., 57) which is attached to the previously selected prefix (772), and the previously selected working block (64) resulting in a complete telephone number -- i.e., 772-6457. This procedure is then repeated numerous times by the computer to generate more random numbers, so that we have a sufficient quantity to conduct the survey. The end result is that each household in the area in which there is a telephone has an equally likely chance of being selected into the sample.

The random sample used in the Granite State Poll was purchased from Scientific Telephones Samples (STS), Foothill Ranch, California. STS screens each selected telephone number to eliminate non-working numbers, disconnected numbers, and business numbers to improve the efficiency of the sample, reducing the amount of time interviewers spend calling non-usable numbers.

Each of these randomly generated telephone numbers is called by one of our interviewers from a centrally supervised facility at the UNH Survey Center. If the number called is found not to be a residential one, it is discarded and another random number is called. (Approximately forty-five percent of the numbers were discarded because they are found to be businesses, institutions, or not assigned.) If it is a residential number, the interviewer then randomly selects a member of the household by asking to speak with the adult currently living in the household who has had the most recent birthday. This selection process ensures that every adult (18 years of age or older) in the household has an equally likely chance of being included in the survey. No substitutions are allowed. If, for example, the randomly selected adult is not at home when the household is first contacted, the interviewer cannot substitute by selecting someone else who just happens to be there at the time. Instead, he or she must make an appointment to call back when the randomly selected adult is at home. In this way, respondent selection bias is minimized.

When the Interviewing Was Done

New Hampshire adults in the Granite State Poll were interviewed between April 8 and April 18, 2010. Each selected respondent was called by a professional UNH Survey Center interviewer from a centrally supervised facility at the UNH Survey Center. Telephone calls during the field period were made between 9:00 AM and 9:00 PM.

Response Rates

Interviews were completed with 503 randomly selected adults in New Hampshire from a sample of 5,443 randomly selected telephone numbers. Using American Association for Public Opinion (AAPOR) Response Rate 4, the response rate for the Spring, 2010 Granite State Poll was 25 percent. The formula to calculate standard AAPOR response rate is:

$$\frac{I}{((I+P) + (R+NC+O) + e(UH+UO))}$$

I=Complete Interviews, **P**=Partial Interviews, **R**=Refusal and break off, **NC**=Non Contact, **O**=Other, **e**=estimated portion of cases of unknown eligibility that are eligible, **UH**=Unknown household, **UO**=Unknown other.

Weighting of Data

The data have been weighted to account for known biases of telephone surveys. The data in the Granite State Poll are weighted by the number of adults and telephone lines within households to equalize the chances that any one adult would be selected for inclusion. The data are also weighted by respondent sex, and region of the state.

Sampling Error

The Granite State Poll, like all surveys, is subject to sampling error due to the fact that all residents in the area were not interviewed. For those questions asked of five hundred (500) or so respondents, the error is +/-4.4%. For those questions where fewer than 500 persons responded, the sampling error can be calculated as follows:

$$\text{Sampling error} = \pm (1.96) \sqrt{\frac{P(1-P)}{N}}$$

Where **P** is the percentage of responses in the answer category being evaluated and **N** is the total number of persons answering the particular question.

For example, suppose you had the following distribution of answers to the question, "Should the state spend more money on road repair even if that means higher taxes?" Assume 1,000 respondents answered the question as follows:

YES	- 47%
NO	- 48%
DON'T KNOW	- 5%

The sampling error for the "YES" percentage of 47% would be

$$\pm (1.96) \sqrt{\frac{(47)(53)}{1,000}} = \pm 3.1\%$$

for the "NO" percentage of 48% it would be

$$\pm (1.96) \sqrt{\frac{(48)(52)}{1,000}} = \pm 3.1\%$$

and for the "DON'T KNOW" percentage of 5% it would be

$$\pm (1.96) \sqrt{\frac{(5)(95)}{1,000}} = \pm 1.4\%$$

In this case we would expect the true population figures to be within the following ranges:

YES	43.9% - 50.1% (i.e., 47% +/-3.1%)
NO	44.9% - 51.1% (i.e., 48% +/-3.1%)
DON'T KNOW	3.6% - 6.4% (i.e., 5% +/-1.4%)

APPENDIX B:
QUESTIONNAIRE AND CODEBOOK

This appendix contains the questionnaire used in the Spring 2010 Granite State Poll. It also includes the following information about the data:

1. The numeric codes used to categorize the answers given by survey respondents.
2. A code indicating the sponsor of the question.
3. The variable names and numbers of the variables in the SPSS file of the data.
4. The missing data codes used in the SPSS file (indicated by an asterisk [*])

Granite Poll 37A, APRIL, 2010
FINAL

Q:INTRO

"Good afternoon / evening. My name is _____ and I'm calling for the Granite State Poll from the University of New Hampshire Survey Center. This month, the University is conducting a confidential study of public opinion in New Hampshire, and we'd really appreciate your help and cooperation."

"Do you live at this residence all year round or are you on vacation in New Hampshire?"

- 1 LIVE IN NH YEAR ROUND
- 2 SEASONAL, JUST VACATIONING
- 99 REFUSED

IF (ANSWER = 1) SKIPTO BIR1

IF (ANSWER = 2) SKIPTO THANKS1

IF (ANSWER = 99) SKIPTO REF1

Q:BIR1

"In order to determine who to interview, could you tell me, of the adults aged 18 or older who currently live in your household -- including yourself -- who had the most recent birthday? I don't mean who is the youngest, but rather, who had the most recent birthday?"

- 1 INFORMANT
- 2 SOMEONE ELSE -- ASK TO SPEAK TO THAT PERSON
- 3 DON'T KNOW ALL BIRTHDAYS, ONLY SOME
- 4 DON'T KNOW ANY BIRTHDAYS OTHER THAN OWN
- 99 REFUSED

IF (ANSWER=1) SKIPTO SEX

IF (ANSWER=2) SKIPTO INT2

IF (ANSWER=4) SKIPTO SEX

IF (ANSWER=99)SKIPTO REF2

Q:BIR2

"Of the ones that you do know, who had the most recent birthday?"

- 1 INFORMANT
- 2 SOMEONE ELSE -- ASK TO SPEAK TO THAT PERSON
- 3 PERSON NOT AVAILABLE
- 99 REFUSED

IF (ANSWER= 1) SKIPTO SEX
IF (ANSWER = 2) SKIPTO INT2
IF (ANSWER = 3) CTRLEND
IF (ANSWER = 99) SKIPTO REF2

Q:SEX

"Thank you very much for helping us with this important study."

"Before we begin I want to assure you that all of your answers are strictly confidential. They will be combined with answers from other people from across the state. Your telephone number was randomly selected from all families in New Hampshire. This call may be monitored for quality assurance."

"Participation is voluntary. If you decide to participate, you may decline to answer any question or end the interview at any time."

IF ASKED - "This survey will take about 15 minutes to complete."

RECORD SEX OF RESPONDENT

- 1 MALE
- 2 FEMALE
- 3 RESPONDENT REFUSES TO DO SURVEY
- 99 NA

Q:TOWN

"First, in what town do you live?"

RECORD NUMBER OF TOWN FROM SHEET

- 997 OTHER
- 998 DK - DO NOT PROBE
- 999 NA / REFUSED

GC1

"Let's begin. How familiar are you with current legislation that proposes the expansion of legal gambling in New Hampshire ... very familiar... somewhat familiar ... not very familiar ... or not familiar at all?"

- 1 VERY FAMILIAR
- 2 SOMEWHAT FAMILIAR
- 3 NOT VERY FAMILIAR
- 4 NOT FAMILIAR AT ALL
- 98 DON'T KNOW/NOT SURE
- 99 NA/REFUSED

GC2

“As you may have heard, the state of New Hampshire is considering expanding legal gambling in New Hampshire beyond the lottery, racetracks, and charitable games that are already permitted. Please tell me if you support or oppose each of the following types of gambling facilities that are being proposed.”

“Do you support or oppose development of slot machines at current horse and dog racing tracks?”

“Is that strongly or just somewhat?”

- 1 STRONGLY SUPPORT
